

ZBIO C2106: Neuromuscular Skeletal Assessment 2

Module Title	ə:	Neuromuscular Skeletal Assessment 2
Language o	f Instruction:	English
Credits:	10	
NFQ Level:	6	
	10	
Module Deli	vered In	2 programme(s)
Teaching & Strategies:	Learning	This will be delivered as 2 hours theory and 4 hours practical per week. Students may access the material via Blackboard in advance of the theory and practical classes to encourage active learning. Lectures will cover the module content as outlined above in theory via powerpoint lectures with an emphasis on clinical and functional anatomy. Students will be required to examine and discuss case histories in an interactive manner which will assist the student to develop lateral thinking and broaden their clinical reasoning process. This style of learning will be carried out through group discussion and problem-solving. The practical component will • allow students to develop practical competencies, attitudes, and behaviours appropriate for managing a patient case. • develop a problem-solving approach and be competent in selecting appropriate examination techniques for presenting patient cases • develop a methodological approach for progression of assessment • Promote learning via investigation of case presentations and clinical problems. Case studies, journals, and recommended texts will be incorporated and posted on blackboard as well as powerpoint presentations and practical cases on DVD and recommended web links.
Module Aim	:	To develop the students understanding and interpretation of the clinical assessment for neuromusculoskeletal impairments. Develop their clinical reasoning process of the neuromusculoskeletal system with emphasis on the lower quarter incorporating the Lumbar spine, Sacroiliac, Hip, Knee, Ankle, and Foot joints, and associated soft tissues.
Learning Ou	utcomes	
On successf	ul completion of th	his module the learner should be able to:
LO1		components and clinical relevance of the subjective and objective examination of the lower extremity. emonstrate the rationale, within a client assessment, to plan and formulate a working hypothesis.
LO2		reasoning and process that underpins red flag identification in the assessment of neuromusculoskeletal using validated frameworks as they relate to the lower quadrant
LO3	reference to the	e and analyse human movement and be able to recognise and analyse abnormal movement patterns with lower quarter. Develop the recognition and clinical significance and association of anatomy and pathology of I throughout this module.
LO4		and range of movement of the lower quarters actively, passively and at joint level using accessory motion nise and clinically appraise the components required within this assessment and be able to interpret findings
LO5		components of the postural foot examination with reference to assessment and identification of rearfoot upination, midfoot, and forefoot biomechanical assessment and the impact and consequences on the lower
LO6		ly perform an assessment of the peripheral nervous system as it relates to the lower quarter and be able to et its findings in relation to the presenting scenario.
Pre-requisit	e learning	
	ommendations learning (or a prac	ctical skill) that is recommended before enrolment in this module.
No recomme	endations listed	
Incompatibl These are m		e learning outcomes that are too similar to the learning outcomes of this module.
No incompat	ible modules liste	d
Co-requisite	e Modules	
No Co-requis	site modules listed	
Requiremen This is prior l		ctical skill) that is mandatory before enrolment in this module is allowed.
Successful c	completion of year	1 or equivalent

ZBIO C2106: Neuromuscular Skeletal Assessment 2

Indicative Content

Module Content & Assessment

NMSA II

This module will focus on the clinical assessment and the interpretation of the Lumbar Spine, sacroiliac joint, hip, knee, ankle, and foot
Practical

Assessment, interpretation and clinical reasoning skills will be exercised with reference to the articular, muscular, fascial and neural systems in the above areas.

Assessment Breakdown %	
Continuous Assessment 30.00%	
Practical	70.00%

Continuous Assessment

Assessment	Assessment Description	Outcome	% of	Assessment
Type		addressed	total	Date
Other	Continuous Assessments will be provided on an ongoing basis throughout the whole year. These could take the form of case study interpretations, short answers and questions and/or group presentations. Each CA will be weighted according to its content.	1,2,3,4,5,6	30.00	n/a

No Project

Practical				
Assessment Type	Assessment Description	Outcome addressed	% of total	Assessment Date
Practical/Skills Evaluation	The first to be at midterm worth 20% and the second at the end of the semester worth 50%	1,2,3,4,5,6	70.00	Sem 1 End
No End of Module Form	nal Examination			

SETU Carlow Campus reserves the right to alter the nature and timings of assessment

ZBIO C2106: Neuromuscular Skeletal Assessment 2

Module Workload

Workload: Full Time	e	
Workload Type	Frequency	Average Weekly Learner Workload
Practicals	12 Weeks per Stage	4.00
Lecture	12 Weeks per Stage	2.00
Estimated Learner Hours	15 Weeks per Stage	11.87
	Total Hours	250.00

Module Delivered In			
Programme Code	Programme	Semester	Delivery
CW_SASRA_B	Bachelor of Science (Honours) in Sports Rehabilitation and Athletic Therapy	4	Mandatory
CW SAPHS C	Higher Certificate in Science in Physiology and Health Science	4	Mandatory
