Module Aim:	The aims of the module are to equip the student with the mathematical skills required for the study of the course.

Learning Outcomes	
<i>On successful completion of this module the learner should be able to:</i>	
LO1	Calculate the area and volume of regular shapes and to use algebra to determine parameters and to derive units for parameters from expressions.
LO2	Use algebraic methods to solve and manipulate equations.
LO3	Evaluate distances, angles and areas for right angled and non right angled triangles.
LO4	Plot and interpret linear and non linear functions and extract information from the plots.
LO5	Produce statistical graphs including histograms and ogives and calculate Mode, Mean, Median and the quartile values.
