

Module Title:	Creative Studio
Language of Instruction:	English
Credits:	5
NFQ Level:	7
Module Delivered In	2 programme(s)
Teaching & Learning Strategies:	The Problem Based Learning (PBL) teaching and learning paradigm is employed in this module. The students are initially given an induction into this way of learning. Subsequently, they are given a number of team problems to solve. Each student has the opportunity to play different roles within their team. The problems are tackled in a studio environment with supervision & guidance provided by the module tutors. At the end of the problem resolution cycle, the students present their findings to the tutors and their peers. The final element of the module sees the students tackle an individual problem that incorporates all elements from the team problems, along with some new challenges.
Module Aim:	To equip the student with a solid understanding of digital art content pipeline creative process.
Learning Outcomes	
<i>On successful completion of this module the learner should be able to:</i>	
LO1	Analyse and evaluate digital artifact requirements
LO2	Work in teams to develop digital art for games and user interfaces
LO3	Carry out independent research to support team work and self-evaluate outcomes
Pre-requisite learning	
Module Recommendations	
<i>This is prior learning (or a practical skill) that is recommended before enrolment in this module.</i>	
No recommendations listed	
Incompatible Modules	
<i>These are modules which have learning outcomes that are too similar to the learning outcomes of this module.</i>	
No incompatible modules listed	
Co-requisite Modules	
No Co-requisite modules listed	
Requirements	
<i>This is prior learning (or a practical skill) that is mandatory before enrolment in this module is allowed.</i>	
Game Programming	

Module Content & Assessment

Indicative Content

Project management

Project planning & tracking. Coordinating work within a team. Agile development

Creative Practice

Concepts art and production ready artefact production

User Experience Optimisation

Optimising software and game UI to produce the optimal UX

Enhancing UX

Improve users and players tactile, emotional and aesthetic response to a software and game system through user testing, playtesting, iterative refinement and analysis of case studies

Learning & problem solving

Identify, brainstorm and resolve UX/UI and conveyance problems individually and as a team

Assessment Breakdown

%

Continuous Assessment

60.00%

Project

40.00%

Continuous Assessment

Assessment Type	Assessment Description	Outcome addressed	% of total	Assessment Date
Other	Practical labs involving practising creative skills in preparation for the authentic projects	1,2,3	60.00	n/a

Project

Assessment Type	Assessment Description	Outcome addressed	% of total	Assessment Date
Project	The students will be given a common individual problem that will require of them to consolidate all their learning from the group problems and apply this to develop more complex simulations and modelling. The assessment protocol for this problem will involve the student producing their own individual plan to tackle the problem, presenting their work on resolving the problem at the end and providing the tutors with a reflective account on their learning experience while working on this problem.	1,3	40.00	n/a
