

SURV C1504: Surveying and Recording 1

Language of Instruction: English Credits: 5 NFQ Level: 6 Module Delivered In 2 programme(s) Teaching & Learning Strategies: Learning shall be through: lectures, Demonstrations, Tutorials, Practical's & project feedback. Intensive group studio-based learning, Site visits to live projects to observe the construction site in operation. learning by doing for practical's eg setting up a level, creating a site grid, site surveys measured surveys of rooms and building elements such as stairs etc. and report writing to record findings. Module Aim: Aims 1. To introduce students to the history and development of surveying from ancient civilisations to present day. 2. To introduce the concept of contours & maps in relation to the site/ ground. Including site suitability tests & concept of ground/ soil investigations. To introduce the concepts of ordinance survey maps GPS, GIS, maps, vector maps & raster maps. To demonstrate how maps are utilised in planning for development plans and by design professionals in the construction industry. 3. To introduce students to the concepts of accurately setting up the dumpy level and complete check methods. To introduce students to the process of accurately setting up the dumpy level and check its accuracy by using and recording the two-peg test. 4. To introduce students to the principles of	Module Title			Surveying and Recording 1
Credits: 5 Oraclia: 5 Module Dolivered In 2 programme(s) Taching & Learning Learning shall be through: lectures, Demonstrations, Tutorials, Practical's & project feedback. Intensive group study-based learning, the usate to live projects to observe the construction site in organization exceeding study based learning, the usate to live projects to observe the construction site in organization exceeding study based learning, the usate to live projects to observe the construction site or operation. learning and building elements such as statis etc. and report writing to record findings. Module Aim: Aims 1. To introduce students to the history and development of surveys of normal and building elements such as statis etc. and report writing to record findings. Module Aim: Aims 1. To introduce students to the history and development of surveys of normal and the process of accurately setting up the during the concepts of leveling, the use of EDM, Theodolites and Total stations. To demonstrate the process of accurately setting up the during the concepts of leveling, the use of EDM. Theodolites and total stations. To demonstrate the process of accurately setting up the during development plans and thy design professionals in the concepts of creates and volumes. Learning Outcomes Condenstand the history and development of surveying from ancient civilisations to present day. Condenstand the history and development of surveying from ancient civilisations to present day. To understand the concept of ontrons as mays in relation to the site ground. Including site at a cincludate and record ora ta tereord acculate and record				
NFQ Level: 6 Module Delivered In 2 programme(s) Teaching & Learning Learning shall be through: lectures. Demonstrations. Tutorials, Practical's & project feedback. Intensive program of the process of construction state in operation. Jearning by doing for practical's e.g. esting up a level, creating a site grid, site surveys measured surveys of rooms and building elements such as states etc. and report writing to record findings. Module Aim: Aims 1. To introduce students to the history and development of surveying from ancient civilisations to present day. 2. To introduce the concept of contours & maps in relation to the site ground. Including site concepts of ordinance survey maps GPS, GIS, maps, vector maps & raster maps. To demonstrate how maps are undited in planing for organize science grid in the process of concording the two-program. So the process of concording the two-program development plans and by design protessionals in the construction industry. 3. To introduce to the concepts of investigations. To introduce students to the process of concording the two-program. So the process of concording the two-program development plans and by design protessionals in the construction industry. To introduce students to the process of concording the two-program development of surveying from ancient civiliations. To introduce students to the process of concording the two-program development of surveying from ancient civiliating and recording the two-program development of surveying from ancient civiliations. To introduce the process of conclusing and the concepts of revelling and acculate and record and the process of conclustents and by design professionals in the concepts of levelling and acculate and record and the process of conclustents and volumes. Lost conderstand the incordup	Language of	mstructio	<i>n</i> .	
Module Delivered In 2 programme(s) Teaching & Learning Strategies: Learning shall be through: lectures, Demonstrations, Tutorials, Practical's & project feedback. Intensive groups build-based learning, Site visits to live projects to observe the construction site in operation. learning by doing for practical's e.g. setting up a level, creating a site grid, site surveys measured surveys of rooms and building elements such as stairs etc. and report writing to record findings. Module Aim: Aims 1. To introduce students to the history and development of surveying from ancient civilisations to present day. 2. To introduce the concept of contours & maps in relation to the sited ground. Including site operation in the sited ground. Including site operation is and by design professionals in the concepts of ordinance survey maps GPS, GIS, maps, vector maps & rester maps. To demonstrate how maps are upiled within the operative of multiple of the form operative of multiple of the form operative in university sating up the durk check and complete net whereas 10 volumes of the works (SIS. To demonstrate the principles of the principles of maps, scale, ordinance survey, GPS, GIS. To demonstrate the principles of leveling and actualities of regular and include the learner should be able to: Consumesture To understand the kinzer and weleopment of surveying from ancient civilisations to present day. Cloa To understand the concepts of ordinance survey maps GPS, GIS, maps, vector maps & relation to the site ground. Including site suitability tests & concept of ground's gift weley and the site of archinance survey maps GPS, GIS, maps, vector maps & raster maps. To understand the concepts of ordinance survey maps GPS, GIS, maps, vector maps & raster maps. To understand the concepts of	Credits:		5	
Teaching & Learning Learning shall be through: lectures, Demonstrations, Tutorials, Practical's & project feedback. Intensive projects is observe the construction site in operation. learning by doing for practical's eg aeting up a level, creating a site grid, site surveys measured surveys of rooms and building elements such as stains set. and report writing to record findings. Module Aim: Aims 1. To introduce students to the history and development of surveying from ancient civilisations to present day. 2. To introduce the concept of contours & maps in relation to the site/ground. Including site students to the econstruction fundings. Module Aim: Aims 1. To introduce students to the history and development of surveying from ancient civilisations to present day. 2. To introduce students to the construction fundings. To introduce students to the construction fundings. Module Aim: Aims 1. To introduce students to the history and development plants. To demonstrate the princeptes of mages CBPS, CIS, maps, vector maps & raster maps. To demonstrate the princeptes of maps, scale, ordinance survey, CRS, CIS. To demonstrate the princeptes of maps, scale, ordinance survey, CRS, CIS. To demonstrate the princeptes of calculating and recording reduced levels on a site. To demonstrate the princeptes of calculating and record or ontor maps and development of surveying from ancient civilisations to present day. Loan To understand the history and development of surveying from ancient civilisations to present day. LO1 To understand the history and development of surveying from ancient civilisations to present day. LO2 To understand the history and development of surveying from a	NFQ Level:		6	
Strategies: group studio-based learning, Site visits to live projects to observe the construction site in operation. learning by doing for practical's ego setting up a level, creating a site gift, site surveys measured surveys of rooms and building elements such as stairs etc. and report writing to record findings. Module Alm: Aims 1. To introduce students to the history and development of surveying from ancient civilisations to server the app of SPS. GIS, maps, vector maps for ask raster maps. To demonstrate the process of completing a level, creating and Total stations. To introduce students to the survey maps of SPS. GIS, maps, vector maps fraster maps. To demonstrate the principles of the while your development plans and by design professionals in the construction industry. 3. To introduce students to the process of calculating stating a level survey and book, record and mathematically check the result using the quick check and completion as the log constrate the principles of the while stating and check is accuracy by using and recording the two-peg test. 4. To introduce students to the principles of the while static acru be used to create and calculating and recording areas and volumes. Learning Dutcomes To understand the history and development of surveying from ancient civilisations to present day. LO2 To understand the concept of contours & maps in relation to the site/ ground. Including site surability tests & concept of development plans and by design professionals in the construction industry. LO3 To understand the concept of contours & maps in relation to the site/ ground. Including site suitability tests & concept of ground solid investigations. To understand the concept of contours & maps in relation to the site/ ground. Including site suitability tests & co	Module Deliv	vered In		2 programme(s)
present day. 2. To introduce the concept of contours & maps in relation to the site ground. Including site widebilt to the concepts of ordinance survey maps GPS, GIS, maps, vector maps & raster maps. To demonstrate the process of completing a level survey and mathematically check the results using the quick check and complete check methods. To introduce students to the process of accurately setting up the dumpy level and check its accuracy by using and recording the two-pet test. A To introduce students to the process of accurately setting up the dumpy level and check its accuracy by using and recording the two-pet test. A To introduce students to the principles of evelling and calculating ground/ and recording the two-pet test. A To introduce students to the process of calculating and recording the two-pet test. A To introduce students to the process of calculating and recording the two-pet test. A To introduce students to the process of calculating and recording the two-pet test. A To introduce students to the process of calculating and recording the two-pet test. A To introduce students to the process of calculating and recording the dump level and irregular and irre		Learning		group studio-based learning, Site visits to live projects to observe the construction site in operation. learning by doing for practical's eg setting up a level, creating a site grid, site surveys measured surveys of rooms
On successful completion of this module the learner should be able to: LO1 To understand the history and development of surveying from ancient civilisations to present day. LO2 To understand of the concept of contours & maps in relation to the site/ ground. Including site suitability tests & concept of ground/ soil investigations. To understand the concepts of ordinance survey maps GPS_GIS, maps, vector maps & raster maps. To understand how maps are utilised in planning for development plans and by design professionals in the construction industry. LO3 To understand the concepts of leveling, the use of EDM, Theodolites and Total stations. To have the ability to carry out a level survey and book, record and mathematically check the results using the quick check and complete check methods. To have the ability to go through the process of accurately setting up and using the dumpy level and check its accuracy by using and recording the two-peg test. LO4 To apply the principles of maps, scale, ordinance survey, GPS, GIS. To understand and apply the principles of leveling and drawings for a site. LO5 To calculate and record areas and volumes of regular and irregular areas and volumes. Pre-requisite learning	Module Aim:	:		present day. 2. To introduce the concept of contours & maps in relation to the site/ ground. Including site suitability tests & concept of ground/ soil investigations. To introduce the concepts of ordinance survey maps GPS, GIS, maps, vector maps & raster maps. To demonstrate how maps are utilised in planning for development plans and by design professionals in the construction industry. 3. To introduce students to the concepts of levelling, the use of EDM, Theodolites and Total stations. To demonstrate the process of completing a level survey and book, record and mathematically check the results using the quick check and complete check methods. To introduce students to the process of accurately setting up the dumpy level and check its accuracy by using and recording the two-peg test. 4. To introduce students to the principles of maps, scale, ordinance survey, GPS, GIS. To demonstrate the principles of levelling and calculating ground/ reduced levels on a site. To demonstrate how this data can be used to create and calculate and record contour maps and drawings for a site. 5. To introduce students to the process of calculating and recording the survey.
LO1 To understand the history and development of surveying from ancient civilisations to present day. LO2 To understand of the concept of contours & maps in relation to the site/ ground. Including site suitability tests & concept of ground's oil investigations. To understand the concepts of ordinance survey maps GPS, GIS, maps, vector maps & raster maps. To understand how maps are utilised in planning for development plans and by design professionals in the construction industry. LO3 To understand the concepts of levelling, the use of EDM. Theodolites and Total stations. To have the ability to carry out a level survey and book, record and mathematically check the results using the quick check and complete check methods. To have the ability to go through the process of accurately setting up and using the dumpy level and check its accuracy by using and recording the two-peg test. LO4 To apply the principles of maps, scale, ordinance survey, GPS, GIS. To understand and apply the principles of levelling and calculating ground/ reduced levels on a site. To utilise this data to create and calculate and record contour maps and drawings for a site. LO5 To calculate and record areas and volumes of regular and irregular areas and volumes. Pre-requisite learning Module Recommendations This is prior learning outcomes that are too similar to the learning outcomes of this module. SURV C1504: Surveying and Recording 1

Module Content & Assessment

Indicative Content

1.

To introduce students to the history and development of surveying from ancient civilisations to present day.

2.

To introduce the concept of contours & maps in relation to the site/ ground. Including site suitability tests & concept of ground/ soil investigations. To introduce the concepts of ordinance survey maps GPS, GIS, maps, vector maps & raster maps. To demonstrate how maps are utilised in planning for development plans and by design professionals in the construction industry.

3.

To introduce students to the process of accurately setting up and using the dumpy level and check its accuracy by using and recording the two-peg test.

4.

To introduce students to the concepts of levelling, the use of EDM, Theodolites and Total stations. To demonstrate the process of completing a level survey and book, record and mathematically check the results using the quick check and complete check methods.

To introduce students to the principles of maps, scale, ordinance survey, GPS, GIS. To demonstrate the principles of levelling and calculating ground/ reduced levels on a site. To demonstrate how this data can be used to create and calculate and record contour maps and drawings for a site.

6.

To introduce students to the process of calculating and recording areas and volumes of regular and irregular areas and volumes.

Assessment Breakdown	%
Continuous Assessment	10.00%
Project	15.00%
Practical	15.00%
End of Module Formal Examination	60.00%

Continuous A	ssessment			
Assessment Type	Assessment Description	Outcome addressed	% of total	Assessment Date
Written Report	Prepare a written and typed report that investigates process of levelling for a construction project and investigate the potential use of EDM, Theodolites and Total stations. Source relevant equipment. Demonstrate an understanding of how these instruments are used in practice.	3	10.00	n/a

Project				
Assessment Type	Assessment Description	Outcome addressed	% of total	Assessment Date
Project	Contour Survey & areas and volumes. 1. Create a site grid with reduced levels. Mathematically calculate contours for the site, to create an accurate topographical survey of the site. 2. Calculate a series of regular and irregular volumes and areas in relation to the site and proposed building. Prepare a written and typed report that shows calculation methods for the set questions.	1,2,4,5	15.00	n/a

Practical	Practical			
Assessment Type	Assessment Description	Outcome addressed	% of total	Assessment Date
Practical/Skills Evaluation	Report: Set up a dumpy / engineers' level and write a report to explain the process. Complete a two-peg test and write up a report to explain the process and checking accuracy.	1,3	7.50	n/a
Practical/Skills Evaluation	Complete a level survey for a given site. Calculate reduced / ground levels for a given set of points. Produce a series of sketches and scaled drawings and diagrams that records the level survey.	1,3	7.50	n/a

End of Module	Formal Examination			
Assessment Type	Assessment Description	Outcome addressed	% of total	Assessment Date
Formal Exam	Final Exam. The examination will be formed by a series of questions based on the learning outcomes 1,2,3,4,5 & 6.	1,2,3,4,5	60.00	End-of- Semester

SETU Carlow Campus reserves the right to alter the nature and timings of assessment
