

Module Title			Studio 2a	
Language o	rinstructio	on:	English	
Credits:		10		
NFQ Level:				
NFQ Level:		6		
Module Deli	vered In		2 programme(s)	
Strategies: Fi in In ap			Problem based learning using Studio based projects. Group/team work utilised to support peer learning. Freehand drawing process and other media utilised as a means of problem-solving and communicating information. One to one detail reviews/tutorials and group 'crits', all to provide student feedback. International and local Technical study trips organized to selected sites/buildings to support architectural appreciation, building documentation and observation skills ; pre-visit tutorial to brief the buildings, and work to be carried out 'on site'.	
Module Aim	:		Studio 2 is the principal Architectural technology module and establishes an approach to technical design. The aim of this module is to establish an approach to technical design under the following headings: • Investigation • Integration • Contextual development. The learner will be introduced to timber technology and its application to a small scale non domestic building type. Students will research timber and choose an appropriate structure and external envelope combination and incorporate the principles of weathering, structure, insulation and more e.g. sound or fire resistance in the technical design solution. The aim is to ensure the student can apply and integrate the technology modules; this is applied to the development of the Studio project by exploring primarily the materials and construction techniques utilised in the chosen building types and as outlined in the Project brief. The Contextual Development aim will focus on a holistic design approach that responds to environmental design and relevant building level. Sustainable design is inherent in all modules and projects. The studio also aims to support architectural appreciation and project documentation skills by conducting international and local study trips.	
Learning Ou	itcomes			
On successf	ul completio	on of tl	his module the learner should be able to:	
LO1			opriate construction methods and materials by undertaking structured research and respond to the sign brief relative to the design intent	
LO2	Resolve t	echnic	al design issues using a combination of freehand drawing and other media including model making.	
LO3	Apply the type	requir	ements of the relevant Regulations, Codes and Standards to technical design solutions for chosen building	
LO4			e and integrate structural, environmental and services factors to a technical design solution and prepare ing drawings, specification and scheduling for chosen building type.	
LO5	Appreciat technical		erve and document Architectural details of important buildings and sites through international and local visits.	
	loornin			
Pre-requisit	ommenda			
This is prior learning (or a practical skill) that is recommended before enrolment in this module. No recommendations listed				
Incompatibl	e Modules		e learning outcomes that are too similar to the learning outcomes of this module.	
No incompat				
Co-requisite	Modules			
No Co-requis		s liste	1	
Requiremen This is prior l		a prac	ctical skill) that is mandatory before enrolment in this module is allowed.	
Learners mu	st have suc	cessfu	Illy completed Studio 1 (both Semester 1 & Semester 2)	

PRAC: Studio 2a

Module Content & Assessment

Indicative Content

Timber Project

Studio based project will involve Investigation (research stage) application & integration (sketch design stage), and appropriate Contextual Development (final proposed solutions) with reference to site layout, structures and appropriate external envelope solutions; using drawing (esquisse and final Revit), suitable product information, specification, schedule and building performance report: The Studio project is integrated with AP&L 1; BTM&S 2; BP&S 2 and Graphics CAD & BIM 2. Typical project includes Community Centre/Student Centre building: a vehicle for developing students skills in working with timber Framed structures in Non domestic buildings.

International/ Local technical Study trips The Technical study trips involves visiting a range of interesting historic and modern buildings and documenting them through writings, sketches, diagrams, and photos. The purpose of these visits is to support students understand of the various aspects of designing and constructing a building and to get a much deeper insight and meaningful understanding/appreciation of the buildings.

Assessment Breakdown	%
Project	80.00%
Practical	20.00%

No Continuous Assessment

Project				
Assessment Type	Assessment Description	Outcome addressed	% of total	Assessment Date
Project	Timber Project	1,2,3,4	80.00	n/a

Practical				
Assessment Type	Assessment Description	Outcome addressed	% of total	Assessment Date
Practical/Skills Evaluation	Case Studies: International/Local technical study trips	5	20.00	n/a

No End of Module Formal Examination
