<b>Teaching &amp; Learning Strategies:</b>	The learning outcomes will be achieved through the following teaching methodologies: 1. Lectures with the inclusion of PowerPoint slides in relation to key theorists and theories. 2. Whole class debates, small group discussions and role plays to apply cognitive and social psychological theories covered in lectures to social care professional practice contexts. 3. Tutorials including in class pop quizzes and tests to encourage learner engagement, participation and reflection and help students and lecturers to assess learning on an ongoing basis. 4. Self-directed independent learning through reading of books, peer-reviewed journal articles, critical reviews of classic studies in cognitive and social psychology, viewing of online lectures from key international theorists and scholars.
<b>Module Aim:</b>	The aim of this module to provide the learner with an overview of key theorists and theories in the fields of cognitive and social psychology and to apply these theories to social care practice contexts. Ethical concerns arising in a number of classic psychology experiments will be highlighted and linked to the CORU Code of Professional Conduct and Ethics for Social Care Workers (2017). Criticisms of mainstream psychology will be included, both from critical psychologists and scholars from other disciplinary backgrounds, with the aim of encouraging integrated multi and interdisciplinary professional social care practice perspectives.
