# **GAME: Machine Learning for Games**

| University   |   |  |  |  |
|--|---|--|--|--|
| Module Title:  | Machine Learning for Games  |  |  |  |
| Language of Instructio   | n: English  |  |  |  |
| Credits:   | 5   |  |  |  |
| NFQ Level:   | 8   |  |  |  |
| Module Delivered In  | 1 programme(s)  |  |  |  |
| Teaching & Learning Strategies:  | Traditional lectures are used to convey knowledge from teacher to student, and students are actively encouraged to engage in discussion during class. During the practical sessions, students will undertake various laboratory exercises implementing and exploring a variety of algorithms. Group learning is also utilised via a module group project and also a cross-module group project as possible. A term paper will involve a more in-depth study of the topics raised. |  |  |  |
| Module Aim:  | To immerse students in the formal theory, and the application of contemporary techniques in Machine Learning for computer games development.  |  |  |  |
| Learning Outcomes  |   |  |  |  |
| On successful completion   | n of this module the learner should be able to:   |  |  |  |
| LO1 Demonstra  | ate an excellent understanding of non symbolic approaches to Artificial Intelligence  |  |  |  |
| LO2 Understand, evaluate and communicate the key principles, theories and techniques specific to the training of Machin Learning models. |   |  |  |  |
| LO3 Apply key developme  | principles, theories and techniques (particularly Machine Learning technologies) with respect to computer games ent.  |  |  |  |
| Pre-requisite learning   |   |  |  |  |
| Module Recommendations This is prior learning (or a practical skill) that is recommended before enrolment in this module.                |   |  |  |  |
| No recommendations listed  |   |  |  |  |
| Incompatible Modules These are modules which have learning outcomes that are too similar to the learning outcomes of this module.        |   |  |  |  |
| No incompatible modules listed   |   |  |  |  |
| Co-requisite Modules   |   |  |  |  |

**GAME: Machine Learning for Games** 

### **Module Content & Assessment**

Introduction to Machine Learning
Probability, Inference, Clustering, N-Gram Prediction

Artificial Neural Networks
Perceptron, Multilayer Networks, Backpropagation, Simmulated Annealing

Genetic Algorithms
Genetic encoding, Genetic Operators, Selection, Mutation, Combining GAs and Neural Networks

**Agent Based Systems and Reinforcement Learning**ABS concepts, Reinforcement Learning, q-Learning, DQN

| Assessment Breakdown             | %      |
|----------------------------------|--------|
| Continuous Assessment            | 30.00% |
| Project                          | 20.00% |
| End of Module Formal Examination | 50.00% |

| Continuous Assessment |  |                      |               |                    |
|-----------------------|--|----------------------|---------------|--------------------|
| Assessment<br>Type    | Assessment Description   | Outcome<br>addressed | % of<br>total | Assessment<br>Date |
| Case Studies          | Students are required to implement specific algorithms within a gaming context | 1,2,3                | 30.00         | n/a                |

| Project         |                                    |                      |               |                    |
|-----------------|------------------------------------|----------------------|---------------|--------------------|
| Assessment Type | Assessment Description             | Outcome<br>addressed | % of<br>total | Assessment<br>Date |
| Project         | Intended as a cross-module project | 2,3                  | 20.00         | n/a                |

No Practical

| End of Module Formal Examination |  |                      |               |                     |
