

<b>Module Title:</b>	Aircraft Structural Mechanics and Analysis
<b>Language of Instruction:</b>	English
<b>Credits:</b>	10
<b>NFQ Level:</b>	8
<b>Module Delivered In</b>	<a href="#">1 programme(s)</a>
<b>Teaching &amp; Learning Strategies:</b>	The module will be delivered using lectures, tutorials and laboratory sessions.
<b>Module Aim:</b>	To provide the students with the knowledge and skills required for evaluate a range of structures under complex loading condition by analytical and numerical analysis.
<b>Learning Outcomes</b>	
<i>On successful completion of this module the learner should be able to:</i>	
LO1	Analyse complex stresses and strains due to combined loading and loading on oblique plains.
LO2	Plot the stresses and strains at any plane across the field using graphical methods such as Mohr's circle.
LO3	Apply the theories of elastic failures to composite structures and assymmetric beams.
LO4	Execute the mathematical and physical principles underlying linear static structural Finite Element Analysis (FEA).
LO5	Analyse complex structural problems using commercial FEA software packages. Demonstrate the ability to design a component/assembly and carry out bolted joint analysis using FEA
LO6	Contribute effectively, as an individual or as part of a group, to the planning and realization of investigations in a laboratory environment into the behaviour of structural materials in service.
<b>Pre-requisite learning</b>	
<b>Module Recommendations</b>	
<i>This is prior learning (or a practical skill) that is recommended before enrolment in this module.</i>	
No recommendations listed	
<b>Incompatible Modules</b>	
<i>These are modules which have learning outcomes that are too similar to the learning outcomes of this module.</i>	
No incompatible modules listed	
<b>Co-requisite Modules</b>	
No Co-requisite modules listed	
<b>Requirements</b>	
<i>This is prior learning (or a practical skill) that is mandatory before enrolment in this module is allowed.</i>	
No requirements listed	

## Module Content & Assessment

### Indicative Content

#### Stress Transformations

\*Two-dimensional stress; Stress on oblique planes; Mohr's circle of stress; Principal stresses. \*Application to combined bending and shear stress in beams, combined bending and torsion in shafts

#### Strain Transformations

\*Strains on oblique planes; Principal strains; Mohr's circle of strain; Derivation of principal stresses from principal strains; Strain gauge rosettes

#### Theories of Elastic Failure

\*Theories of elastic failure for ductile and brittle materials - Rankine, St Venant, Von-Mises, Haigh and Modified Mohr's theory

#### Bending of Asymmetric Sections

\*Product second moment of area; \*Neutral axis; Maximum stress

#### Finite Element Analysis

Introduction to linear Finite Element static and dynamic analysis for discrete and distributed mechanical and aerospace structures using industry standard software. Theories relating to numerical integration, boundary conditions, element calculations, assembly, solution, error analysis, post processing. 3D FEA of parts and assemblies. Parametric modelling, mesh studies and quality, FEM validation, contact set studies including bolted joints analysis Introduction to natural frequencies, modal analysis, transient response. Introduction to optimization and design, sensitivity analysis, integration of FEM with optimization, applications in the design of solids and structures

Assessment Breakdown	%
Continuous Assessment	20.00%
Practical	20.00%
End of Module Formal Examination	60.00%

### Continuous Assessment

Assessment Type	Assessment Description	Outcome addressed	% of total	Assessment Date
Written Report	Students will be required to submit a report on topics relating to structural Analysis using FEA. Students will also partake in a group design and analysis project.	3,4,5,6	20.00	n/a

No Project

### Practical

Assessment Type	Assessment Description	Outcome addressed	% of total	Assessment Date
Practical/Skills Evaluation	Students will be expected to perform analysis of a part/assembly using FEA software.	3,4,5	20.00	n/a

### End of Module Formal Examination

Assessment Type	Assessment Description	Outcome addressed	% of total	Assessment Date
Formal Exam	Final exam	1,2,3,4,5	60.00	End-of-Semester

SETU Carlow Campus reserves the right to alter the nature and timings of assessment

**Module Workload**

<b>Workload: Full Time</b>		
<i>Workload Type</i>	<i>Frequency</i>	<i>Average Weekly Learner Workload</i>
Lecture	12 Weeks per Stage	4.00
Laboratory	12 Weeks per Stage	4.00
Independent Learning Time	15 Weeks per Stage	10.27
Total Hours		250.00

**Module Delivered In**
