

MECH: Soil Mechanics

Module Title:			Soil Mechanics			
Language of Instruction:		n:	English			
Credits: 5		5				
		-				
NFQ Level:		6				
Module Deli	vered In		1 programme(s)			
Teaching & Learning Strategies:			Lectures Practicals Private study			
Module Aim:			The aims of the module are: (1) to provide students with a sound knowledge of the fundamentals of soil mechanics laboratory testing, as a basis for further studies in the area of geotechnical engineering; (2) to provide students with the technical ability to participate in quality control in earthworks and other associated areas.			
Learning Ou	tcomes					
On successfu	ul completio	n of th	his module the learner should be able to:			
LO1 Examine and revaries		and re	ate the significance of moisture content in a soil and describe the soil property changes as moisture content			
			ted soil to improve project sustainability in accordance with the BS/Eurocode 7 Classification Systems, nowledge of technical report writing and appreciation of the the importance of moisture content			
LO3	have a basic knowledge of site investigation stages and techniques;					
LO4			rd Identification and Risk Assessment for the laboratory tests undertaken in this module and demonstrate undertaking these tests			
LO5						
Pre-requisite learning						
Module Recommendations This is prior learning (or a practical skill) that is recommended before enrolment in this module.						
No recommendations listed						
Incompatible Modules These are modules which have learning outcomes that are too similar to the learning outcomes of this module.						
No incompatible modules listed						
Co-requisite Modules						
No Co-requisite modules listed						
Requirements This is prior learning (or a practical skill) that is mandatory before enrolment in this module is allowed.						
No requirements listed						

MECH: Soil Mechanics

Module Content & Assessment

Indicative Content

(1) Introduction To Soils Technology

(a) Geological formation of soil and rock - Rock cycle. (b) Clay and silt minerals.

(2) Site Investigation (a) Aims and objectives (b) Desk study (c) Site reconnaissance (d) Ground investigation

(3) Classification Of Soils (a) Moisture content (b) Atterberg limits (c) Particle size analysis - wet sieve analysis (d) Particle size analysis - sedimentation (e) Particle density

(4) Strength Of Soil (a) Shear strength theory (b) Direct shear test - shear box (c) Quick undrained triaxial test (d) Field testing - vane test (e) California Bearing Ratio

(5) Sustainability and Re-use of Soil (a) Optimum Moisture Content (b) Dry density / moisture content test (c) Measurement of in-situ density (D) Converting waste soil and rock into engineered material to increase project sustainability

Typical Laboratory Experiments

(a) Soil sampling & sub-sampling (b) Classification of a soil (c) Measurement of Optimum Moisture Content (d) Measurement of California Bearing Ratio (e) Measurement of shear strength parameters using shear box (f) Measurement of shear strength parameters using triaxial apparatus

Self-Assessment Students assess own H&S assessments

Assessment Breakdown	%
Continuous Assessment	60.00%
End of Module Formal Examination	40.00%

Continuous Assessment						
Assessment Type	Assessment Description	Outcome addressed	% of total	Assessment Date		
Other	In-class exams, practicals	1,2,3,5	60.00	n/a		

No Project	
No Practical	

End of Module Formal Examination					
Assessment Type	Assessment Description	Outcome addressed	% of total	Assessment Date	
Formal Exam	n/a	1,2,3,4,5	40.00	End-of-Semester	

SETU Carlow Campus reserves the right to alter the nature and timings of assessment

MECH: Soil Mechanics

Module Workload

Workload: Full Time		
Workload Type	Frequency	Average Weekly Learner Workload
Lecture	12 Weeks per Stage	3.00
Practicals	12 Weeks per Stage	3.00
Estimated Learner Hours	12 Weeks per Stage	6.00
	Total Hours	144.00

Module Delivered In					
Programme Code	Programme	Semester	Delivery		
CW_CMCIV_D	Bachelor of Engineering in Civil Engineering	3	Mandatory
