

<b>Module Title:</b>	Engineering Mathematics 5
<b>Language of Instruction:</b>	English
<b>Credits:</b>	5
<b>NFQ Level:</b>	7
<b>Module Delivered In</b>	<a href="#">8 programme(s)</a>
<b>Teaching &amp; Learning Strategies:</b>	A series of lectures will be delivered using whiteboard and data projector. The Institute Managed Learning Environment will be used to interactively communicate with students e.g. on-line test, discussion forums, reference information Mathematical software (e.g. Matlab) will be used by students to re-enforce the mathematical principles and practices
<b>Module Aim:</b>	To give the student sufficient mathematical knowledge to support the other modules of the course and provide a solid foundation for further studies
<b>Learning Outcomes</b>	
<i>On successful completion of this module the learner should be able to:</i>	
LO1	Solve IVP's (linear differential equations) using Laplace Transforms.
LO2	Model uncertainty using Probability Distributions.
LO3	Use computer applications and programs to model mathematical systems
LO4	Apply differential equations to engineering applications.
<b>Pre-requisite learning</b>	
<b>Module Recommendations</b>	
<i>This is prior learning (or a practical skill) that is recommended before enrolment in this module.</i>	
No recommendations listed	
<b>Incompatible Modules</b>	
<i>These are modules which have learning outcomes that are too similar to the learning outcomes of this module.</i>	
No incompatible modules listed	
<b>Co-requisite Modules</b>	
No Co-requisite modules listed	
<b>Requirements</b>	
<i>This is prior learning (or a practical skill) that is mandatory before enrolment in this module is allowed.</i>	
No requirements listed	

## Module Content & Assessment

### Indicative Content

#### Laplace Transforms

Introduction to differential equations and their solutions. Use Laplace Transforms to solve first and second order differential equations.

#### Probability Distributions

Random variables and simple probability distributions Binomial and Poisson probability distributions. Continuous random variables. The Normal distribution.

#### Numerical Analysis Software

Application of numerical methods through software packages such as Python and/or Matlab

### Assessment Breakdown

	%
Continuous Assessment	70.00%
Practical	30.00%

### Continuous Assessment

Assessment Type	Assessment Description	Outcome addressed	% of total	Assessment Date
Examination	Each student will be obliged to complete a continuous assessment program	1,2,4	70.00	n/a

No Project

### Practical

Assessment Type	Assessment Description	Outcome addressed	% of total	Assessment Date
Practical/Skills Evaluation	Series of assessments based on the application of numerical methods through software	3,4	30.00	n/a

No End of Module Formal Examination

**SETU Carlow Campus reserves the right to alter the nature and timings of assessment**

**Module Workload**

<b>Workload: Full Time</b>		
<i>Workload Type</i>	<i>Frequency</i>	<i>Average Weekly Learner Workload</i>
Lecture	12 Weeks per Stage	3.00
Lab/Lecture	12 Weeks per Stage	2.00
Independent Learning	15 Weeks per Stage	4.33
Total Hours		125.00

**Module Delivered In**
