

Requirements
This is prior learning (or a practical skill) that is mandatory before enrolment in this module is allowed.

No Co-requisite modules listed

Bachelor of Engineering (Ordinary) in Civil Engineering

DSGN C3501: Road Design

Select appropriate bituminous pavement structures for vehicle loading and specify appropriate testing for these materials. Demonstrate appropriate presenting, written and visual communication skills including writing reports, presentations and preparing drawings using 3D road design software. Pre-requisite learning Pre-requisite Pre-requisite		XX	University		
Select appropriate bituminous pavement structures for vehicle loading and specify appropriate testing for these materials. Demonstrate appropriate presenting, written and visual communication skills including writing reports, presentations and preparing drawings using 3D road design software. Pre-requisite learning Pre-requisite Pre-requisite	Module Title) :	Road Design		
Module Delivered In 1 programme(s) Teaching & Learning Strategies: Lectures; Project Work; Private Study The aims of this module are to provide the students with a knowledge of (1) the Civil 3D design package for the geometric layout design of roads and junctions; and (2) the bituminous materials used in road construction Learning Outcomes On successful completion of this module the learner should be able to: LO1 Prepare a geometric design of a section of road and junction using 3D road design software. LO2 Select appropriate bituminous pavement structures for vehicle loading and specify appropriate testing for these materials. LO3 Demonstrate appropriate presenting, written and visual communication skills including writing reports, presentations and preparing drawings using 3D road design software. Pre-requisite learning Module Recommendations This is prior learning (or a practical skill) that is recommended before enrolment in this module. No recommendations listed Incompatible Modules	Language of Instruction:		English

DSGN C3501: Road Design

Module Content & Assessment

Indicative Content

Geometric Design for Highways

(a) Geometric details of Roundabouts (b) Sign posting and road marking (c) Geometric parameters on design speed (d) Horizontal allignment (e) Vertical allignment (f) Geometric design project for a highway (g) Relevant excerpts from Transport Infrastrucure Ireland DMRB

Civil 3D

(a) Horizontal Alignment (b) Vertical Alignment (c) Assemblies (d) Corridors (e) Sample Lines (f) Cut and Fill Volume Calculations

Soil Engineering for Highway Design

(a) Soil characteristics (b) Basic engineering properties of soil (c) Classification of soils for highway construction (d) Soil compaction (e) Sub- base and road- base materials f) sustainable re use of materials in road construction

Materials in Pavement Design Part I

(a) Binder Types (b) Manufacture, storage and handling of bitumen (c) Constitution, structure and mechanical testing of bitumen (d) Bitumen emulsions and modified bitumen (e) Aggregate specifications (f) Composition and specification of bituminous paving material (g) Blended aggregates and mix design (h) Transport, laying and compaction (i) Recycled materials in road construction

Design of Flexible Pavements

(a) Structural Components (b) General principles (c) Foundation design (d) Pavement design using LL 1132 (Powell et al, 1984) (e) Pavement design using DMRB HD 25-26 charts (f) Traffic loading

Assessment Breakdown	%
Continuous Assessment	20.00%
Project	80.00%

Continuous Assessment				
Assessment Type	Assessment Description	Outcome addressed	% of total	Assessment Date
Other	End of Term Exam	1,2	20.00	Ongoing

Project					
Assessment Type	Assessment Description	Outcome addressed	% of total	Assessment Date	
Project	Project Literature Review, Presentations etc	2,3	30.00	Sem 1 End	
Project	Geometric Road Design	1,3	50.00	Every Week	

No Practical	
--------------	--

No End of Module Formal Examination
