

Module Title:	Electronic Engineering Practice 1
Language of Instruction:	English
Credits:	5
NFQ Level:	6
Module Delivered In	1 programme(s)
Teaching & Learning Strategies:	A series of lectures, demonstrations and practical sessions will be used to broaden the students' knowledge of the principles and practices of analysing and building electronic circuits and systems.
Module Aim:	To give the students the required knowledge and competencies to use electronic CAD software to simulate, analyse and explore the operation of basic electronic circuits. To give students skills necessary to construct an electronic circuit from a specified schematic or design brief.
Learning Outcomes	
<i>On successful completion of this module the learner should be able to:</i>	
LO1	Operate in an electronics workshop laboratory with due regard for health and safety (H&S) and environmental considerations.
LO2	Test basic electronic circuits using appropriate tools and equipment.
LO3	Design circuit layouts and construct prototype boards.
LO4	Use electronic CAD software to simulate, analyse and explore the operation of basic electronic circuits.
Pre-requisite learning	
Module Recommendations <i>This is prior learning (or a practical skill) that is recommended before enrolment in this module.</i>	
No recommendations listed	
Incompatible Modules <i>These are modules which have learning outcomes that are too similar to the learning outcomes of this module.</i>	
No incompatible modules listed	
Co-requisite Modules	
No Co-requisite modules listed	
Requirements <i>This is prior learning (or a practical skill) that is mandatory before enrolment in this module is allowed.</i>	
No requirements listed	

Module Content & Assessment

Indicative Content

Safety and safe working practices and environmental considerations

Safety precautions when soldering and using tools. Exercise proper safety procedures when working in a laboratory to ensure personal safety including general principles, eating, drinking and an understanding of electric shock hazard.

Environmental Considerations

Understand the life cycle of electronic devices. Learn how devices are recycled and disposed of at the end of their useful life.

Identification of electronic components and their symbol.

Identification of components and correct identification of component pinout using datasheets.

Electronic design, schematic capture and simulation.

Use an industry standard package for Electronic Design and simulation of circuits.

Measurement and Test

Measure and record various circuit parameters such as resistance, voltage and current using electronic test equipment.

Test and measurement of a prototype board.

Build and test circuits on breadboard and compare results with simulation software build circuits.

Soldering and assembly.

Create planning sheet from schematic diagrams before soldering the circuit using strip-board.

Assessment Breakdown

	%
Continuous Assessment	50.00%
Practical	50.00%

Continuous Assessment

Assessment Type	Assessment Description	Outcome addressed	% of total	Assessment Date
Examination	Class and laboratory exercises to be completed along with combined written & practical tests.	3,4	50.00	n/a

No Project

Practical

Assessment Type	Assessment Description	Outcome addressed	% of total	Assessment Date
Practical/Skills Evaluation	Students will complete a number of practical tasks and Lab assignments during the module. Students will be assessed based on the quality of their work, the design decisions they took and the application of their knowledge.	1,2,3,4	50.00	n/a

No End of Module Formal Examination

SETU Carlow Campus reserves the right to alter the nature and timings of assessment

Module Workload

Workload: Full Time		
<i>Workload Type</i>	<i>Frequency</i>	<i>Average Weekly Learner Workload</i>
Practicals	Every Week	2.00
Laboratory	Every Week	2.00
Total Hours		4.00
