

PHYS H1604: Physics

Module Title:			Physics			
Language of Instruction:		า:	English			
Credits: 10		10				
NFQ Level: 8						
Module Delivered In			No Programmes			
Teaching & Learning Strategies:			Lectures: A series of lectures, using whiteboard, data projector and video, will initiate and broaden the students' knowledge of the scientific principles on which aircraft components are based. The initial stages of the module will involve 'everyday' science topics. Practicals: A series of demonstrations and practical exercises designed to motivate the interest of the students in learning the scientific principles.			
Module Aim:			To give the students an understanding of the scientific principles underlying Aircraft Systems and components with emphasis on the underlying principles of Statics, Fluid Dynamics and Thermodynamics.			
Learning Ou	itcomes					
On successfu	ul completior	n of th	nis module the learner should be able to:			
LO1	Describe the nature, structure and properties of the various phases of matter					
LO2	Solve simple problems in mechanics, dynamics, fluid dynamics, thermodynamics, light and sound involving simple physical laws					
LO3	Perform algebraic manipulations and substitutions of physical formulae to solve problems using appropriate units					
LO4	Measure and record experimental data and make appropriate analyses using graphs and/or calculations					
LO5	Explain the	e appl	ication of physical laws in the design, construction and operation of aircraft, and the wider aircraft industry			
Pre-requisite	e learning					
Module Recommendations This is prior learning (or a practical skill) that is recommended before enrolment in this module.						
No recommendations listed						
<i>Incompatible Modules</i> These are modules which have learning outcomes that are too similar to the learning outcomes of this module.						
No incompatible modules listed						
Co-requisite Modules						
No Co-requisite modules listed						
Requirements This is prior learning (or a practical skill) that is mandatory before enrolment in this module is allowed.						
No requirements listed						

PHYS H1604: Physics

Module Content & Assessment

Indicative Content

Matter

Nature of matter: the chemical elements, structure of atoms, molecules; Chemical compounds. States: solid, liquid and gaseous; Changes between states.

Statics

Forces, moments and couples, representation as vectors; Centre of gravity. Elements of theory of stress, strain and elasticity: tension, compression, shear and torsion; Nature and properties of solid, fluid and gas; Pressure and buoyancy in liquids (barometers).

Kinetics

Linear movement: uniform motion in a straight line, motion under constant acceleration (motion under gravity); Rotational movement: uniform circular motion (centrifugal/centripetal forces); Periodic motion: simple harmonic motion; Simple theory of vibration, harmonics and resonance; Velocity ratio, mechanical advantage and efficiency.

Dynamics

Mass Force, inertia, work, power, energy (potential, kinetic and total energy), heat, efficiency; Momentum, conservation of momentum; Impulse; Gyroscopic principles; Friction: nature and effects, coefficient of friction (rolling resistance).

Fluid Dynamics

Specific gravity and density; Viscosity, fluid resistance, effects of streamlining; effects of compressibility on fluids; Static, dynamic and total pressure: Bernoulli's Theorem, venturi.

Thermodynamics

Temperature: thermometers and temperature scales: Celsius, Fahrenheit and Kelvin; Heat definition. Heat capacity, specific heat; Heat transfer: convection, radiation and conduction; Volumetric expansion; First and second law of thermodynamics; Gases: ideal gases laws; specific heat at constant volume and constant pressure, work done by expanding gas; Isothermal, adiabatic expansion and compression, engine cycles, constant volume and constant pressure, refrigerators and heat pumps; Latent heats of fusion and evaporation, thermal energy, heat of combustion.

Optics (Light)

Nature of light; speed of light; Laws of reflection and refraction: reflection at plane surfaces, reflection by spherical mirrors, refraction, lenses; Fibre optics.

Wave Motion and Sound

Wave motion: mechanical waves, sinusoidal wave motion, interference phenomena, standing waves; Sound: speed of sound, production of sound, intensity, pitch and quality, Doppler effect.

Assessment Breakdown	%	
Continuous Assessment	10.00%	
Practical	20.00%	
End of Module Formal Examination	70.00%	

Continuous Assessment Assessment Type Assessment Description Outcome addressed % of total Assessment Date Other Class test, online test 1,2,3,5 10.00 n/a

No Project

Practical								
Assessment Type	Assessment Description	Outcome addressed	% of total	Assessment Date				
Practical/Skills Evaluation	Practical sessions will be held incorporating demonstrations and individual exercises for each student. The student will be expected to write a report for each demonstration / exercise. Some of these reports may be research-based only.	4	20.00	n/a				

End of Module Formal Examination								
Assessment Type	Assessment Description	Outcome addressed	% of total	Assessment Date				
Formal Exam	Each student will sit a formal written examination at the end of the module for which a maximum of 70% will be awarded.	1,2,3,5	70.00	End-of- Semester				

SETU Carlow Campus reserves the right to alter the nature and timings of assessment
