

SYST H2606: Satellite and Microwave Systems

Module Title:		Satellite and Microwave Systems		
Language of Instruction:		English		
Credits:	5			
NFQ Level:	8			
Module Delivered In		1 programme(s)		
Teaching & Learning Strategies:		Combination of lectures and practical laboratory sessions. Lectures will take the form of traditional theory and tutorials. Laboratory sessions take the form of individual & group work.		
Module Aim:		To understand the application of information theory and digital communications concepts in the design of microwave wireless communication systems and to appreciate the operational conditions and constraints of modern microwave systems.		
Learning Outcomes				
On successful compl	etion of t	his module the learner should be able to:		
LO1 Unders	Understand terrestrial and satellite microwave transmission fundamentals.			
LO2 Consid	Consider and select microwave antenna types appropriate to given scenarios.			
LO3 Determ	Determine antenna installation considerations, physical, alignment and path loss.			
LO4 Contra	Contrast the types of transmission lines associated with microwave and satellite systems.			
LO5 Test a	Test and maintain terrestrial and satellite microwave transmission systems.			
Pre-requisite learning				
Module Recommen This is prior learning	dations (or a pra	ctical skill) that is recommended before enrolment in this module.		
No recommendations	listed			
Incompatible Modules These are modules which have learning outcomes that are too similar to the learning outcomes of this module.				
No incompatible modules listed				
Co-requisite Modules				
No Co-requisite modules listed				
Requirements This is prior learning (or a practical skill) that is mandatory before enrolment in this module is allowed.				
No requirements listed				

SYST H2606: Satellite and Microwave Systems

Module Content & Assessment

Indicative Content

Fundamentals of Microwave Radio

Spectrum, propagation characteristics, Freznel zone.

Fundamentals of Satellite Systems

Characteristics of Satellites, System Elements, Satellite Orbit Configurations, Frequency Spectrum Allocations, Satellite Network Architectures, Point-to-Multipoint Networks, Point-to-Point Networks, VSAT Networks, Propagation on the Earth-Space Link.

Microwave link Engineering Antenna choice, positioning, Link Requirements, Electromagnetic Environments, Capacity, Feed Assemblies, Shields and Radomes, High-performance Antennas, High Capacity Antennas, Direct Radio Integration.

Transmission Lines

Types of Waveguide, Flanges, Pressurization, Dehydrators, Waveguide assembly.

Antenna installation Antenna Path Alignment, Antenna Path Loss, Transmission Line Loss, Compass Readings and Azimuth Markers.

Testing and Maintenance VSWR, Test Equipment, Maintenance

Assessment Breakdown	%	
Continuous Assessment	100.00%	

Continuous Assessment				
Assessment Type	Assessment Description	Outcome addressed	% of total	Assessment Date
Multiple Choice Questions	MCQ: The students will be given MCQs to assess their knowledge of terrestrial and satellite microwave systems during the semester.	1,2,3,4,5	60.00	n/a
Written Report	Each student will be given an aspect of satellite communications to research and report on. This will include a presentation to their peers at the end of the semester.	1,2,3,4,5	40.00	n/a

No Project

No Practical

No End of Module Formal Examination
