

Module Title:	2D Game Programming
Language of Instruction:	English
Credits:	5
NFQ Level:	6
Module Delivered In	1 programme(s)
Teaching & Learning Strategies:	The course material will be delivered by a mixture of traditional lectures and laboratory based lectures where learners will complete a series of incremental practical exercises towards building a game prototype. Towards the end of the semester, the students will work fulltime on a two week minor project that is undertaken in conjunction with the other second year course modules.
Module Aim:	Upon completion of this module, learners should be able to explain the main components of a game engine and use external libraries to implement a 2D game.
Learning Outcomes	
<i>On successful completion of this module the learner should be able to:</i>	
LO1	Use a game library API to develop properly architected short game prototypes.
LO2	Implement design patterns that are applicable to interactive applications.
LO3	Work as a member of a development team and use a version control system to manage source code in a team project.
Pre-requisite learning	
Module Recommendations <i>This is prior learning (or a practical skill) that is recommended before enrolment in this module.</i>	
No recommendations listed	
Incompatible Modules <i>These are modules which have learning outcomes that are too similar to the learning outcomes of this module.</i>	
No incompatible modules listed	
Co-requisite Modules	
No Co-requisite modules listed	
Requirements <i>This is prior learning (or a practical skill) that is mandatory before enrolment in this module is allowed.</i>	
Successful completion of year 1 or equivalent	

Module Content & Assessment
Indicative Content
2D Fundamentals

The game loop, event loop and timers. Textures, sprites, basic sprite transformations.

Data serialization formats

Representing game data using data serialization formats. Using a parsing library to implement a level loader.

Input management

Handling player input.

Collisions management

Collision detection and response.

Steering behaviours

NPC navigation with collision avoidance.

Game states

Implementing game states and a HUD system.

Game design patterns

Implementing a common game design pattern, for example object pool pattern.

Version control systems

Committing, checking out, branching and merging.

Assessment Breakdown
%

Project

50.00%

Practical

50.00%

No Continuous Assessment

Project

Assessment Type	Assessment Description	Outcome addressed	% of total	Assessment Date
Project	Use a game library API to develop a short game prototype.	1	25.00	Sem 1 End
Project	Students will work as part of a team to create a playable game given a prescribed theme and gameplay specification. The assessment is staged horizontally across all 5 modules of this semester. This will be a studio style project, where teams work full time (without classes) over a period of two weeks.	1,2,3	25.00	Week 11

Practical

Assessment Type	Assessment Description	Outcome addressed	% of total	Assessment Date
Practical/Skills Evaluation	Participation in and completion of practical work. Students will work in-class on a series of practical exercises distributed over the second semester.	1,2	50.00	n/a

No End of Module Formal Examination

SETU Carlow Campus reserves the right to alter the nature and timings of assessment

Module Workload

Workload: Full Time		
<i>Workload Type</i>	<i>Frequency</i>	<i>Average Weekly Learner Workload</i>
Lecture	12 Weeks per Stage	1.00
Laboratory	12 Weeks per Stage	4.00
Estimated Learner Hours	15 Weeks per Stage	4.33
	Total Hours	125.00
