

SYST C4606: Deep Learning

Module Title:			Deep Learning					
Language of Instruction:		English						
O		c						
Credits:		5						
NFQ Level:		8						
Module Delivered In			1 programme(s)					
Teaching & Learning Strategies:			This module will be delivered through a mix of lectures, laboratory assignments, and projects including a professional write-up. It will employ a mixture of active/task-based learning, reflective learning, and problem-based learning					
Module Aim:			Deep neural networks can inform both the contents of an image or video frame and the content's location within the image boundaries. Additionally, neural networks can manipulate images and video frames. This module investigates methods of image classification, location, and manipulation. The module also examines optimisation of the computation and storage of these neural network models' immense data to provide the student with a demonstrable understanding of the advanced neural network features.					
Learning Ou	tcomes							
On successful completion of this module the learner should be able to:								
LO1	Design AI modules that identify features in images.							
LO2	Develop AI modules to track the movement of features in images.							
LO3	Manage image manipulation within image sets, e.g., using GANs.							
LO4	Improve the performance of the neural network model.							
LO5	Complete	Complete a project as an individual or in a small group to design and implement a solution for a real world problem.						
Pre-requisite	elearning							
Module Recommendations This is prior learning (or a practical skill) that is recommended before enrolment in this module.								
9271	COMP C4602			Computer Vision				
9655	ELEC C4602			Artificial Intelligence and Machine Learning				
Incompatible Modules These are modules which have learning outcomes that are too similar to the learning outcomes of this module.								
No incompatible modules listed								
Co-requisite Modules								
No Co-requisite modules listed								
Requirements This is prior learning (or a practical skill) that is mandatory before enrolment in this module is allowed.								
No requirements listed								

SYST C4606: Deep Learning

Module Content & Assessment

Indicative Content									
Image classification and localisation Models to find the best classification accuracy and localisation of images. Localisation of objects in an image or video stream.									
Semantic segmentation Location and movement of items within a frame.									
Image Manipulation Generative variational auto-encoders, generative adversarial Networks (GANs), spectral normalisation.									
Optimisation Optimisation techniques such as pruning, activation functions, compression, and alternative number representation.									
Ethics, Safety, and Trustworthiness Algorithm and data bias, model safety and EU trustworthiness policy, GDPR considerations.									
Assessment Breakdown		%							
Continuous Assessment	20.00%								
Project	40.00%								
Practical				40.00%					
Continuous Assessment									
Assessment Type		Assessment Description	Outcome addressed		% of total	Assessment Date			
Short Answer Questions		n/a	1,2		20.00	Week 4			
Project									
Assessment Type Asses		ssment Description Outcome addressed			% of total	Assessment Date			
Project	n/a	1,2,3,4,5			40.00	Sem 2 End			
Practical									
Assessment Type		Assessment Description	Outcome addressed		% of total	Assessment Date			
Practical/Skills Evaluation		n/a	1,2,3,4	1,2,3,4		Every Week			
No End of Module Formal Examination									

SETU Carlow Campus reserves the right to alter the nature and timings of assessment
