

## BIOL: Neuromuscular Skeletal Assessment I

Module Title	:		Neuromuscular Skeletal Assessment I
Language of	f Instructio	n:	English
Credits:		10	
NFQ Level:		6	
NFQ Level.		0	
Module Deli	vered In		2 programme(s)
Teaching & Strategies:	Learning		This will be delivered as 2 hours theory and 4 hours practical per week. Students may access the material via Blackboard in advance of the theory and practical classes to encourage active learning. Lectures will cover the module content as outlined above in theory via powerpoint lectures with an emphasis on clinical and functional anatomy. Students will be required to examine and discuss case histories in an interactive manner which will assist the student to develop lateral thinking and broaden their clinical reasoning process. This style of learning will be carried out through group discussion and problem-solving. The practical component will • allow students to develop practical competencies, attitudes, and behaviours appropriate for managing a patient case. • develop a problem-solving approach and be competent in selecting appropriate examination techniques for presenting patient cases • develop a methodological approach for progression of assessment • Promote learning via investigation of case presentations and clinical problems. Case studies, journals, and recommended texts will be incorporated and posted on blackboard as well as powerpoint presentations and practical cases on DVD and recommended web links.
Module Aim	:		To develop the students understanding and interpretation of the clinical assessment for neuromusculoskeletal impairments. Develop their clinical reasoning process of the neuromusculoskeletal system with emphasis on the upper quarter incorporating the Cervical and Thoracic spines, Shoulder, Elbow, Wrist and Hand joints, and associated soft tissues.
Learning Ou	itcomes		
On successf	ul completio	on of ti	his module the learner should be able to:
LO1	within a cl	ient a	components and clinical relevance of the subjective examination. Progressively demonstrate the rationale, ssessment, to plan and formulate a subjective hypothesis that guides the implementation of an appropriate nation of the upper quarter.
LO2			reasoning and process that underpins red flag identification in the assessment of neuromusculoskeletal using validated frameworks, with specific emphasis on the upper quadrant
LO3	within a cl	ient a	components and clinical relevance of the objective examination. Progressively demonstrate the rationale, ssessment, to plan and implement an appropriate objective examination of the upper quarter and interpret its I lead to a clinical hypothesis.
LO4	reference	to the	ve and analyse human movement and be able to recognise and analyse abnormal movement patterns with upper quarter. Develop the recognition and clinical significance and association of anatomy and pathology of d throughout this module.
LO5	using acc	essory	s upper quarter strength and range of movement of the upper quarter actively, passively and at joint level y motion analysis. Recognise and clinically appraise the components required within this assessment and be t findings accordingly.
LO6			ly perform an assessment of the peripheral nervous system, as it relates to the upper quadrant, and be able rpret its findings in relation to the presenting scenario.
Pre-requisite	e learning		
Module Rec This is prior I			ctical skill) that is recommended before enrolment in this module.
No recomme	ndations lis	ted	
Incompatible		ch hav	re learning outcomes that are too similar to the learning outcomes of this module.
No incompati	ible module	s liste	d
Co-requisite	Modules		
No Co-requis	ite module	s liste	d
<b>Requiremen</b> This is prior l		a pra	ctical skill) that is mandatory before enrolment in this module is allowed.
Successful c	ompletion c	of year	1 or equivalent

### BIOL: Neuromuscular Skeletal Assessment I

# Module Content & Assessment

## Indicative Content

#### NMSA I

This module will focus on the clinical assessment and interpretation of the Cervical and Thoracic spine, shoulder, elbow, wrist, and hand articulations and associated soft tissues and innervation.

#### Practical

Assessment, interpretation and clinical reasoning skills will be exercised with reference to the articular, muscular, fascial and neural systems in the above areas.

ssessment Breakdown %	
Continuous Assessment	30.00%
Practical	70.00%

#### Special Regulation

Students must achieve a minimum grade of 35% in both CA and Practical requirements

Continuous A	ssessment			
Assessment Type	Assessment Description	Outcome addressed	% of total	Assessment Date
Other	Continuous Assessments will be provided on an ongoing basis throughout the whole year. These could take the form of case study interpretations, short answers and questions and/or group presentations. Each CA will be weighted according to its content.	1,2,3,4,5,6	30.00	n/a

#### No Project

Practical				
Assessment Type	Assessment Description	Outcome addressed	% of total	Assessment Date
Practical/Skills Evaluation	1 practical worth 70% will constitute the Practical mark. It will be executed at the end of semester 1.	1,2,3,4,5,6	70.00	Sem 1 End

No End of Module Formal Examination

SETU Carlow Campus reserves the right to alter the nature and timings of assessment

## BIOL: Neuromuscular Skeletal Assessment I

## Module Workload

Workload: Full Time		
Workload Type	Frequency	Average Weekly Learner Workload
Practicals	12 Weeks per Stage	4.00
Lecture	12 Weeks per Stage	2.00
Estimated Learner Hours	15 Weeks per Stage	11.87
	Total Hours	250.00

Module Delivered In			
Programme Code	Programme	Semester	Delivery
CW_SASRA_B	Bachelor of Science (Honours) in Sports Rehabilitation and Athletic Therapy	3	Mandatory
CW SAPHS C	Higher Certificate in Science in Physiology and Health Science	3	Mandatory
